Introduction

The **Pulse Lending API** enables trusted partners to seamlessly integrate with Nucleus Commercial Finance, providing a streamlined and efficient way to deliver fast, flexible funding solutions to small & Medium size businesses.

This API exposes core functionality of the Nucleus platform, empowering partners to offer a complete lending experience directly from their own applications or platforms. Whether you're looking to prequalify customers, submit applications, or retrieve offers, the Pulse Lending API provides the tools you need to build a robust and scalable funding journey.

Key Capabilities:

- **Submit Customer Data & Applications**
  Submit customer profiles and loan applications for evaluation. Ensure accurate and efficient data transfer to accelerate the lending process.
- **Get Quotes & Offers**
  Instantly receive real-time funding quotes and offers tailored to the applicant's business. Provide immediate feedback to customers, helping them make informed borrowing decisions.

By integrating with the Pulse Lending API, partners can enhance their financial products and services while giving SMEs access to the capital they need—quickly, securely, and reliably.

Onboarding: Pulse Lending API Integration

This process ensures a smooth and secure setup so you can begin offering embedded lending solutions to your customers.

Step 1: Partnership Approval & Access Request

- Before integration, your organization must be approved as an official partner.
- To request a partnership with Pulse, please email us at **api.support@mypulse.io** for evaluation.
- Once your request is approved:
  - You will receive your API credentials, including Client ID, Client Secret, Subscription key, Grant Type and Scope details.
  - Access to the sandbox (test) environment will be provisioned.

Step 2: Authentication and Connection Management

myPulse 0Auth 2.0 Securely authenticates and provides secure delegated access for third-party applications without exposing user credentials.

Authentication Steps:

- Client can hit on Authentication API and using the above details to generate Bearer token.
- Users need to send bearer token in the Authorization header to access protected resources.
- The generated token remains active for 60 minutes. Once it expires, a new token is required to generated.
- Once the token is generated, you can call the endpoint by including the Bearer token and the provided subscription key in the request headers.
  - **Header Name:** Ocp-Apim-Subscription-Key
  - **Sandbox URL:** https://demo-api.mypulse-sandbox.io
  - **Production URL:** https://prod-api.mypulse.io/

Note: URL will be based on Environment (Sandbox or Production)

Authentication URL : {EnvironmentUrl}/authorization/oauth2/v2.0/token

API Response Codes and Description

Return Code	Response
200	Success
401	Your API request was not properly authorized.
404	One or more of the resources you referenced could not be found.

Step 3: Start with the Sandbox

- Use the sandbox environment to test your integration.
- This environment is safe for development and simulates real-time responses without impacting production systems.

Step 4: Go Live

Once your integration has been tested and approved by our technical team:

- You will receive production credentials.
- API endpoints will be updated to point to the live environment.
- Monitoring, logging, and support agreements will be activated.

Our team will work closely with you during this phase to ensure a smooth transition.

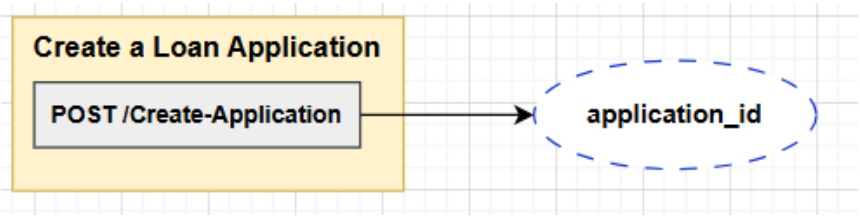
Create a Loan Application

To create a loan application for a business, use the Create-Application API endpoint.



Steps to Create an Application via API

- **Method:** POST
- **Endpoint:** Create-Application
- Upon a successful request, the endpoint will return:
  - **application_id**: Unique identifier used throughout the loan journey.

API Requirements

- The information provided must meet the minimum data requirements. Failure to meet these requirements will result in the application being ineligible for a Nucleus Business Loan.
- If the data is incomplete, the API will return an error code indicating the application ID cannot be created.

Minimum Required Data in Payload

The POST request to /Create-Application/ must include the following minimum set of data:

POST	{EnvironmentUrl}/v1/Create-Application

```
{
  "application": {
   "consent_to_search": “<Boolean>”
  },
  "applicant": {
   "first_name": “<String>”,
   "last_name": “<String>”,
   "email": “<String>”,
   "phone_number": “<String>”,
   "address": [
```

This content is classified: Public

```
    {
      "house_number": “<String>”,
      "flat_number": “<String>”,
      "house_name": “<String>”,
      "street": “<String>”,
      "town": “<String>”,
      "postcode": “<String>”,
      "residential_status": “<String>”,
    },
  ],
  "date_of_birth": “<String>”,
  "percent_of_control": “<Float>”
  "role": “<String>”,
  "guarantor": “<Boolean>”,
  “send_ob_link”: “<Boolean>”,
  “send_oa_link”: “<Boolean>”

    "loan_term":“<Number>”,
   “additional_information” : “<String>”
    }
  }
}
```

Important Notes:

1. **Each application must include exactly one Applicant.**
    - The Applicant's contact must be designated as the Guarantor.
    - All fields related to the Applicant’s contact information are mandatory.

This content is classified: Public

2. **The "consent_to_search" field is required and must be set to true to proceed.**
    - If the consent flag is **false**, the API request will be rejected and return an error code.
3. Customers must be clearly and explicitly informed that credit and fraud checks will be conducted.
4. Your privacy policy must include details about the sharing of customer data with Nucleus Commercial Finance.

Residential Address Format:

Ensure the address is properly formatted for successful credit checks and to avoid delays:

Sample Address

```
{
 "residential_addresses": [
  {
        "house_number": "42",
        "flat_number": "5B",
         "house_name": "Wood House",
        "street": "Baker Street",
        "town": "London",
        "postcode": "NW1 6XE",
        "residential_status": "tenant",
  }
 ]
}
```

Mandatory Information to Create a Lead in the NCF Loan System

- Information for one applicant
- The consent_to_search flag must be set to **true**.
- If the company has more than one director, **two guarantors are mandatory**:
    - The applicant must act as one of the guarantors.
    - The second guarantor must be selected from the remaining directors.

This content is classified: Public

API Response for Application ID

Upon a **Success Response**, the API will return the following:

```
{
   "status": "success",
   "message": "Application submitted successfully",
   "application_id": "abc12345",
   “open_banking_link”: ”https://www.exampleurl.com”
}
```

In case of **Error,** the API will return the following:

```
{
   "fail": true,
   "errors": {
      "first_name": [
         "The first name field is required."
      ],
      "last_name": [
         "The last name field is required."
      ],
      "phone": [
         "The phone field is required."
      ],
      "email": [
         "The email field is required."
      ],
      "company_name": [
         "The company name field is required."
```

This content is classified: Public

```
    ]
  }
}
```

Object Data Type & Description

Sr No.	Field Name	Description	Data Type
1	consent_to_search	Indicates whether the user has given consent to perform a search (credit & fraud)	Boolean
2	first_name	Applicant given name	String
3	last_name	Applicant surname	String
4	email	Applicant email address	String
5	phone_number	Applicant's phone number	String
6	address	Full address string	
7	house_number	House or building number	String
8	flat_number	Apartment or flat number (if applicable)	String
9	house_name	House or building name	String
10	street	Name of the street	String
11	town	Name of the town or city	String
12	postcode	Postal or ZIP code	String
13	residential_status	Applicant’s residential status (Owner, Tenant)	String
14	date_of_birth	Applicant’s date of birth	String format: DD-MM-YYYY)
15	percent_of_control	Percentage of control (ownership in a company)	Number (Float or Integer)
16	Role	Role or position held (e.g., Director, Shareholder)	String
17	guarantor	Indicates whether the person is a guarantor	Boolean
18	send_ob_link	Whether to send an Open Banking link to the user	Boolean
19	send_oa_link	Whether to send an Open Accounting link to the user	Boolean
20	company_name	Name of the company associated with the user	String
21	companies_house_id	Unique identifier for the company in Companies House(Company CRN)	String
22	last_12_months_turnover	Turnover of the company for last 12 months	Number
23	loan_amount	Requested Loan Amount by Customer	Number
24	loan_term	Requested Loan Term by Customer	Number
25	additional_information	Any notes by customer or broker	String

This content is classified: Public

Required Validation:

- **Structure Validation**
  - Ensure all required top-level keys exist application, applicant, directors, and company.
  - Ensure all required nested objects/arrays are present and not null.
- **Field-Level Validation**
  - **Application**
    - consent_to_search: Must be a boolean
  - **applicant & director**
    - first_name, last_name: Required, non-empty strings, alphabetic characters only.
    - email: Must be valid email format.
    - phone_number: Valid phone number format (e.g., 10-digit number, country-specific).
    - date_of_birth: Valid date with format DD/MM/YYYY
    - percent_of_control: Number between 0 and 100 (inclusive).
    - guarantor: Must be boolean.
    - address: Required if guarantor is true, (house_number or flat_number or house_name), street, town, postcode, residential_status.
  - **Company**
    - company_name: Required, non-empty string.
    - companies_house_id: Required, non-empty string.
- **Cross-Field / Business Rule Validation**
  - Director total control: Sum of percent_of_control across all directors should not exceed 100%.

Guarantor presence: At least one guarantor must be true.

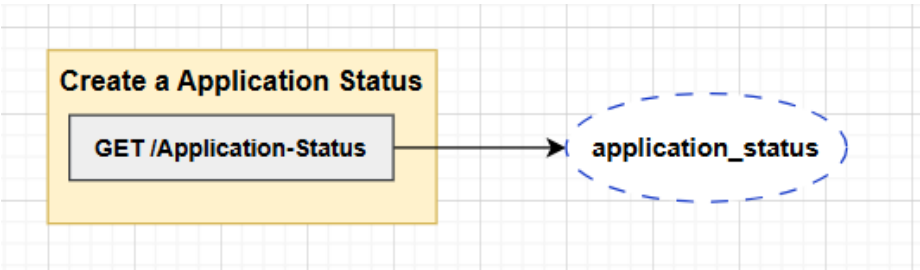
Application Status API

- This API will be used to fetch the real-time status of a loan application from the NCF Loan Management System (LMS) using the Application ID as a reference and return the corresponding status in the response.



- **Method:** GET
- **API Endpoint:** Application-Status

GET	{EnvironmentUrl}/v1/Application-Status/{application_id}

```
{
  "application_id": "<string>",
```

This content is classified: Public

```
  "company_name": "<string>",
  "status": "<string>",
  "loan_offer": {
  "amount": "<Number>",
  "term": "<Number>",
  "interest_rate": "<Number>",
  “repayment_type: “<String>“,
  "repayment_amount": "<Number>",
  "broker_commission_amount": <Number>
 }
}
```

The response values for Application Status are as follows:

- **Decline**
  - Nucleus has assessed the customer but is unable to make an offer.
  - Reason for decline will be included in the response.
- **Pre-Approved**
  - Nucleus has issued a tentative offer based on turnover provided for last 12 months.
  - This offer is subject to change once all information is received.
- **Approved**
  - Nucleus has issued a confirmed offer letter.
  - Display the offer details (view above sample response).
- **Payout**
  - Once the deal is paid out, the status will be set to Payout.
- **InProgress**
  - Nucleus has not made a decision; the application is still in progress.

Object Data Type & Description

Sr No.	Field Name	Description	Data Type
1	application_id	Unique identifier for the application	String
2	company_name	Name of the company associated with the application	String
3	status	Current Status of the Application	String
4	amount	Approved Loan Amount	Number
5	term	Approved Loan Term	Number

This content is classified: Public

6	interest_rate	Approved Interest Rate	Number
7	repayment_type	Approved Repayment Type	String
8	repayment_amount	Approved Repayment Amount	Number
9	broker_commission_amount	Approved Broker Commission	Number

This content is classified: Public
